Class A starch branching enzyme (SBE) has been obtained from potatoes. In class A SBE mols, a flexible N-terminal domain, is found, which is not found in class B mols.

Example 1; Page 49-51; 142pp; English

New potato plant starch having high amylose content - also class A starch branching enzyme and corresp. DNA to alter the viscosity of starch; for use in food, biodegradable products, adhesives, etc.

WPI; 1996-506170/50.

DNA to alter the viscosity estarch; for use in food, biodegradable products, adhesives, etc.
                                                                                                                                  1112
                                                                                                                                                                                       1052
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Class A starch branching enzyme (SBE) has been obtained potatoes. In class A SBE mols., a flexible N-terminal is found, which is not found in class B mols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 1; Page 40-41; 142pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
The rice starch branching enzyme is encoded by the cDNA sequence AAQ73750. The starch content of rice grains can be increased by increasing the expression of branching enzyme in rice plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Key

The method comprises transforming a host, suitable for fermentation, with genes encoding starch- or glycogen-synthesis enzymes, and fermenting the transformants. The specification also describes hosts transformed with a gene active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Producing non-glycogen-like polysaccharides in bacteria, fungi or plants - transformed with genes for enzymes involved in starch or glycogen synthesis allows fermentative production of starches with

These starches are useful for all food and n-food applications of starch. The present sequence is used in e course of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
